PROFESSOR OF BOTANY IN UNIVERSITY COLLEGE, LONDON,
AND THE ROYAL INSTITUTION OF GREAT BRITAIN,
VICE-SECRETARY OF THE HORTICULTURAL SOCIETY,
&c. &c. &c.

NEW SERIES,
COMPLETE IN TEN VOLUMES.

VOL. IV.

MISSOURI
BOTANICAL
GARDEN.

LONDON:
JAMES RIDGWAY AND SONS, PICCADILLY.

MDCCXLI.
MISCELLANEOUS NOTICES.

1. PLEUROTHALLIS recurva; folio obovato coriaceo subobliquo petiolo pluries longiore, spicâ brevi recurvâ, floribus pubescentibus, sepalis lateralis connatis, petalis membranaceis rhombicis acutis, labello membranaceo ovato utrinque sinuato obtuso, columnae margine petaloideo incurvo.

A small creeping plant, with short recurved spikes of dull pale purple flowers. Communicated by Mr. Geo. Graves from the garden of Mrs. Cannon of Stratford.

2. PLEUROTHALLIS luteola; folio ovato canaliculato acuto tridentato petiolo suo breviore, pedunculo trifloro folio adpresso eoque breviore, floribus glabris, sepalis lateralis connatis omnibus carinatis, petalis spathulatis emarginatis, labello lineari obtuso canaliculato glabro.

Another new plant from the same collection as the last, with small yellow flowers. Mr. Graves informs me that both exhale the smell of a sliced cucumber in the middle of the day.

3. APÔRUM sinuatum; foliis lanceolatis æquilateris approximatis, acutis, floribus solitariis axillaribus, labello cuneato elongato intra apicem lineâ hippocrepicâ crassâ sinuata circumdata.

From Singapore, where it was collected by Mr. Cuming. It has the habit of A. anceps, but its leaves are much narrower and longer, and the flowers are pale yellowish green. Communicated by Messrs. Lodiges, (132).

4. GONGÓRA fulva; var. vitellina.

There is a very pretty Gongora in several collections, with bright yellow flowers less spotted than usual, and altogether of a more lively aspect. It is from Mexico, and differs from G. fulva in having smaller leaves, and the upper half of the labellum distinctly shorter than the lower. It however

January A—1841.
108. BOSSIĀEA paucifolia; glabra, inermis, ramis compressis alatis, foliis paucis obovatis oblongis linearibus, pedicellis folio brevioribus, legumin glabro latitudine pluries longiore. Bentham nss.

A little Swan River bush, with winged branches, a few scattered obovate leaves, and yellow and brown flowers of by no means a striking appearance. I have been favoured with specimens by R. Mangles, Esq. of Sunning Hill, and by Messrs. Lowe and Co. of Clapton, and it has also flowered in the garden of the Horticultural Society.

109. EPIDENDRUM (Euepidendrum ?) lacertinum; floribus racemosis, ovarii subsecundis longissimis pendulis bracteis setaceis multoties longioribus, sepali lanceolatis acuminatis, petalis lineari-lanceolatis, labelli adnati trilobi basi bilamellati laciniiis lateralibus triangularibus intermediis linear acuminatis elongatâ, antherâ immersâ, ovario cuniculato.

A singular plant from Guatemala, for which I am obliged to Mr. Bateman. I have only seen the flowers; but as it is stated to have the habit of Galeandra Baueri it probably belongs to the section of this genus which I have called Euepidendrum. The flowers hang down on long stalk-like ovaries from one side of a short raceme. They are bright green with the exception of the column, which is yellow, and the lip which is a little stained with purple, and has very much the appearance of a lizard’s tail, the hind legs being outside the flower, and the head and shoulders buried within the cup.

110. CYPRIPEDIUM (Acaulia) barbatum; acaule, foliis coriaceis acutis canaliculatis maculatis, scapo pubescente, sepalo dorsali cuspidato obtuso ciliato margine revoluta, petalis lineari-oblongis subundulatis fimbriatis margine superiore verrucoso, stamine sterili lunato pubescente.

A very fine herbaceous plant, allied to C. venustum, insigne, and purpuratum, gathered at Sincapore, on Mount Ophir by Mr. Cuming. It has flowers richly stained with purple, and streaked with green veins upon a white ground. It has flowered with Messrs. Loddiges.

111. ORNITHOGALUM (Chlorogalum) divaricatum; foliis glaucis longissimis canaliculatis humifusis, paniculâ divaricatâ, perianthii laciniiis lineariibus undulatiss apice coherentibus mox patentibus, filamentis subulatis apice incurvis, ovarii loculis dispermis.
