CYPripedium. Vide *Lindenia*, I, p. 17.

*Cypripedium insigne*. Vide supra, p. 53.

*C. insigne* var. *montanum*. Vide *Lindenia*, IX, p. 63.

 e may state without any exaggeration that *Cypripedium insigne* is at the present time the most popular of Orchids. This favour is well deserved and fully justified by its transcendent merits : its form is graceful, the flowers are pretty and remain fresh for a long period, even when cut; blooming freely in the depth of winter, easy to cultivate and within the reach of everyone, as it may be reared even in the drawing-room, where it is now frequently to be seen.

The importance of *C. insigne* has been considerably enhanced by the recent introduction of numerous forms of high merit akin to the *montanum* variety, figured in one of the preceding volumes of this collection (pl. 414).

We show, on the double annexed plate, a series of eight of these forms, chosen amongst the most remarkable, and which have all made their appearance amongst the thousands of plants of this kind cultivated in the magnificent green-houses of the HORTICULTURE INTERNATIONALE and in the vast Establishment founded recently at Moortebeek near Brussels, by Messrs. LUCIEN LINDEN et C°.

To complete the list of what has already been obtained from *C. insigne* only in the new Establishment of Messrs. LUCIEN LINDEN et C°, and at the HORTICULTURE INTERNATIONALE, we must add to the eight varieties mentioned above *C. insigne Luciani*, described and figured in the preceding number of the *Lindenia*, and several of the varieties described in the February number of the *Journal des Orchidées*, page 150.
